To The Parent(s)/Guardian(s) of Seventh Grade Students,

School Counseling Office
Kathleen Corsentino
Sandra Griffin, Ed.D.
Kerryann Silvestri
(732) 360-4400

Attached please find a flyer regarding questions and answers pertaining to the HPV Vaccine. As you can see, the Advisory Council on Immunization Practice along with the Centers for Disease Control and Prevention recommend the HPV vaccination for 11-12-year-old boys and girls.

Stacy Ritz
School Nurse
(732) 360-4400

If you have any questions concerning this flyer, please contact your child's physician for further clarification.

Sincerely,

A handwritten signature in cursive script that reads "Martha J. Simon".

HPV VACCINE: INFORMATION FOR PARENTS

As parents, you do everything you can to protect your children's health now and for the future. Did you know that you can protect them from several types of cancer with HPV vaccination?

What is human papillomavirus (HPV)?

Human papillomavirus (pap-ah-LO-mah -VYE-rus), or HPV, is a group of common viruses that affect both boys and girls. HPV can cause anal and mouth/throat cancers. It can also cause cancer in the cervix, vulva, and vagina in women; and cancer of the penis in men. Different types of HPV can cause genital warts.

What are the symptoms?

Even though most people do not show any symptoms, HPV can still be spread through contact during any type of sexual activity with an infected person.

Most people will be infected at some point in their lives. HPV infection is most common during the late teens and early 20s.

- ◆ About **79 million** Americans are currently infected with HPV.
- ◆ About **14 million** people become infected each year.

Is there a cure?

There is no cure for HPV, but there are ways to treat the health problems caused by HPV such as genital warts and certain cancers. Most infections will clear on their own, but there is no way to know which people will develop cancer or other health problems. **Prevention is better than treatment.**

How can HPV be prevented?

HPV vaccination is a series of shots given over several months. Completing the vaccination series is important to ensure maximum protection against cancers caused by HPV infection. Over **90%** of cancers caused by HPV are preventable through HPV vaccination. It also protects against the HPV types that cause most genital warts.

Is HPV vaccine safe?

The vaccine is very safe. Side effects are generally mild and may include a sore arm, fever, and headache.

What if we can't afford the vaccine?

Families who need help paying for vaccines should ask their healthcare provider about the Vaccines for Children (VFC) program. The VFC program provides vaccines to uninsured and underinsured children younger than 19 years old. Parents may have to pay administration and office visit fees. For more information, contact the NJ VFC at (609) 826-4862.

Who should get HPV vaccine?

The vaccine is recommended for 11 to 12-year-old boys and girls because:

- ◆ The immune response to the HPV vaccine is better in preteens.
- ◆ Your child should be completely vaccinated before they are exposed to the virus.

Catch-up vaccination can be given at ages 13 through 26. The most important thing is for all preteens to complete the HPV vaccine series. Teens and young adults who haven't started or finished the HPV vaccine series should make an appointment today to get vaccinated.

Pregnant women and anyone who has ever had a life-threatening allergic reaction to any component of the vaccine or to a previous dose should not receive the vaccine.

Where can I get more information?

- ◆ **Your healthcare provider**
- ◆ **New Jersey Department of Health**
www.nj.gov/health/cd/vpdp.shtml
- ◆ **Centers for Disease Control and Prevention**
www.cdc.gov/hpv
- ◆ **Vaccines for Children (VFC) Program**
www.cdc.gov/vaccines/programs/vfc/parents/qa-flyer.pdf
